

Caspian Pairs Trader

With Caspian Pairs Trader, Caspian OEMS clients can now simultaneously buy and sell multiple crypto securities on different exchanges to take advantage of temporary market inefficiencies.

Access multiple exchanges

Caspian's market-leading price-spread and price-ratio pairs algorithms enable you to trade pairs using coins on any of the 35 exchanges Caspian is currently connected to, with coins on the same or different exchanges

Simple set-up

Available out of the box with the Caspian OEMS, Pairs Trader requires minimal implementation time

Access new strategies

With Caspian Pairs Trader you can now use statistical arbitrage or relative value crypto trading strategies to take advantage of currently inefficient crypto markets

Key Features of Caspian Pairs Trader

- Trade spot, futures and perpetual swaps on one or both legs of the pair
- Link in-house signals or bots to the pairs algorithms through the Caspian inbound API
- Run many "spreads" in parallel utilising on-screen dashboard alerts to help capture alpha across many exchanges at once
- Fine tune the various algo parameters to control the aggression levels on each leg considering the differing liquidity levels across exchanges
- Set rules to automatically control hedge risk in a granular way
- Reduce pair set-up times by cloning existing pairs and opening new pairs from dedicated watchlists
- Monitor order progression slice-by-slice and amend pairs orders on-the-fly

Why Caspian?

Caspian is a complete asset management solution that covers the lifecycle of the trade. It includes a fully developed OEMS, PMS and RMS. It provides a single interface into all major crypto exchanges and OTC providers, a complete suite of sophisticated trading algorithms, real-time and historical P&L and exposure tracking and professional customer service.
